Subject Index of Volume 65

Aqueous precipitation-phase extraction
of hydrous zirconia particles, 207
Adhesion
of powders to a substrate surface; investigation of applied compression on, 167
of wet particles to walls in a model trough, 177
Adhesive and frictional interactions between ceramics, 21
Aerosols
thermophoretic and photophoretic motion of, 447
Agglomerate strength
effect on attrition during processing, 321
Agglomerated ceramic powders
wall friction in compaction of, 7
Agglomeration and crystallization kinetics in the batch drowning-out precipitation of potash alum with aqueous acetone, 187
Aggregation
rapid, of dilute suspensions and experimental investigation of Smoluchowski's theorem using photon correlation spectroscopy, 251
Application of jet grinding to fluidized bed granulation, 305
Aqueous acetone
use of, in batch drowning-out precipitation of potash alum, 187
Aqueous precipitation-phase extraction route to hydrous zirconia particles, 207
Attrition
effect of agglomerate strength on, during processing, 321
of NaCl crystals, influence of processing conditions on, 311
Attrition and fragmentation of carbonaceous particles generated from the fluidized bed combustion of fuel–water slurries, 335

Batch precipitation
kinetic effects on particle morphology and size distribution during, 195
Binary powder mixtures
Young's modulus of, 103
Boric acid production
by the calcination and leaching of powdered colemanite, 433
Break-up of cylindrical clusters of solids particles under gravity flow in a two-dimensional column, 453
Bulk flow properties of powders
improvement of, 469

Calcite
wet-milled; influence of surfactants on the mechanical properties and comminution of, 403
Carbonaceous particles generated from the fluidized bed combustion of fuel–water slurries
attrition and fragmentation of, 335
Ceramic powders
agglomerated; wall friction in compaction of, 7
Cohesive particulate solids
mechanical properties of, 113
Colemanite
powdered; boric acid production by the calcination and leaching of, 433
Compaction
of agglomerated ceramic powders; wall friction in, 7
Compression
applied, investigation of, on adhesion of powders to a substrate surface, 167
of two-dimensional packings of cylinders made of rubber and Plexiglas, 47
Computational fluid dynamics modelling
of vertical pneumatic conveying dryers, 477
Continuum analysis
high and low strain rate properties of powders for, 51
Crystal morphology of some ionic crystals
understanding and controlling, 219
Crystallization and agglomeration kinetics
in the batch drowning-out precipitation of potash alum with aqueous acetone, 187
Crystals
ionic; understanding and controlling the crystal morphology of, 219

Dies of complicated geometry
flow of pastes through, 393
Diesel fuels and solutions of *n*-alkanes
an instrument for examination of nucleation from solution and its application to study of precipitation from, 243
Dispersions
complex polydisperse; sedimentation behaviour of, 411

Effect
of agglomerate strength on attrition during processing, 321
of electrical clamping forces on mechanics of particulate solids, 37
of particle size and porosity on particle film coatings, 441
of interface constraints on the deformation of pastes, 381
Elastic spheres
impact of, with and without adhesion, 153
Electrical clamping forces
effect on mechanics of particulate solids, 37

Factors affecting the formation and properties of wet compacts, 283
Fine-scale adhesive and frictional interactions between ceramics, 21

Elsevier Sequoia/Printed in The Netherlands

Flow
in granular materials, initiation of, 89
initiation of, in granular materials, 89
of pastes through dyes of complicated geometry, 393
Fluidizability of Ni/SiO_2 aerogels
improvement of, by reducing interparticle forces, 461
Fluidized bed combustion of fuel–water slurries
attrition and fragmentation of carbonaceous particles generated from, 335
Fluidized bed process
tablet properties as a function of properties of granules made in, 293
Formation of nylon 610 capsules
by interfacial polymerization in a high-voltage electric field, 227
Fragmentation and attrition of carbonaceous particles generated from the fluidized bed combustion of fuel–water slurries, 335
Friction
internal, in high-pressure compacted powder beds; a shear cell to characterize, 75
wall, in compaction of agglomerated ceramic powders, 7
Frictional and adhesive interactions between ceramics, 21

Granular materials
initiation of flow in, 89
single particle friction cell for measuring contact frictional properties of, 61
Granulation of microcrystalline celluloses
source variation in, 273
Granulation phenomena
microlevel-based characterization of, 257
Granules made in a fluidized bed process
tablet properties as a function of the properties of, 293
Gravity flow in a two-dimensional column
break-up of cylindrical clusters of solids particles under, 453

High and low strain rate properties of powders for continuum analysis, 51

Impact of elastic spheres with and without adhesion, 153
Improvement
of bulk flow properties of powders, 469
of the fluidizability of Ni/SiO_2 aerogels by reducing interparticle forces, 461
Influence
of processing conditions on attrition of NaCl crystals, 311
of surfactants on the mechanical properties and comminution of wet-milled calcite, 403
Initiation of flow in granular materials, 89
Instrument for the examination of nucleation from solution and its application to the study of precipitation from diesel fuels and solutions of *n*-alkanes, 243
Interface constraints
effect of, on deformation of pastes, 381
Interparticle forces
and bulk rheology of suspensions, relationship between, 371
improvement of the fluidizability of Ni/SiO_2 aerogels by reducing, 461
Investigation of applied compression on the adhesion of powders to a substrate surface, 167

Jet grinding
application to fluidized bed granulation, 305

Kinetic effects of particle morphology and size distribution during batch precipitation, 195

Liquid membrane emulsion
control of particle size in precipitation of solids in, 235

Mechanical properties
and comminution of wet-milled calcite influence of surfactants on, 403
of cohesive particulate solids, 113
Micro-mechanical connection between the single-particle strength and the bulk strength of random packings of spherical particles, 125
Microcrystalline celluloses
source variation in wet massing (granulation) of, 273
Microlevel-based characterization of granulation phenomena, 257
Molecular structure of organic solids and their Young's modulus
relationship between, 139

n-Alkanes
solutions of, an instrument for examination of nucleation from solution and its application to the study of precipitation from, 243
Nickel–silica aerogels
improvement of fluidizability of, by reducing interparticle forces, 461
Non-cohesive, vibrating particulate solids
theoretical model of shear in, 81
Nucleation from solution and its application to the study of precipitation from diesel fuels and solutions of *n*-alkanes, an instrument for examination of, 243
Nylon 610 capsules
formation of, by interfacial polymerization in a high-voltage electric field, 227

Organic solids
relationship between Young's modulus of elasticity and molecular structure of, 139

Particle film coatings
effect of particle size and porosity on, 441
Particle morphology and size distribution during batch precipitation
kinetic effects of, 195
Particle size and porosity
effect on particle film coatings, 441
Particles
wet; adhesion to walls in a model trough, 177

Particulate solids
effect of electrical clamping forces on mechanics of, 37
vibrating, non-cohesive, theoretical model of shear in, 81
Pastes
effects of interface constraints on deformation of, 381
flow of, through dies of complicated geometry, 393
Photon correlation spectroscopy
rapid aggregation of dilute suspensions and experimental investigation of Smoluchowski's theorem using, 251
Photophoretic and thermophoretic motion of aerosols, 447
Plexiglas and rubber cylinders
compression of two-dimensional packings of, 147
Polymerization
interfacial, in a high-voltage electric field; formation of nylon 610 capsules by, 227
Porosity and particle size
effect on particle film coatings, 441
Potash alum
batch drowning-out precipitation of, with aqueous acetone, 187
Powder beds
high-pressure compacted; a shear cell to characterize internal friction in, 75
Powder mixtures
binary; Young's modulus of, 103
Powders
adhesion to a substrate surface; investigation of applied compression on, 167
agglomerated ceramic, wall friction in compaction of, 7
for continuum analysis, high and low strain rate properties of, 51
improvement of bulk flow properties of, 469
Precipitation
from diesel fuels and solutions of *n*-alkanes, an instrument for examination of nucleation from solution and its application to study of, 243
of solids in a liquid membrane emulsion: the control of particle size, 235
Processing conditions
influence of, on attrition of NaCl crystals, 311

Rapid aggregation of dilute suspensions and experimental investigation of Smoluchowski's theorem using photon correlation spectroscopy, 251
Recent developments in dense suspension rheology, 343
Relationship between interparticle forces and the bulk rheology of suspensions, 371
Relationship between Young's modulus of elasticity of organic solids and their molecular structure, 139
Rheology
bulk, of suspensions; relationship between interparticle forces and, 371
dense suspension; recent developments in, 343
Rubber and Plexiglas cylinders
compression of two-dimensional packings of, 147

Sedimentation behaviour of complex polydisperse dispersions, 411
Shear in a vibrating, non-cohesive particulate solid
theoretical model of, 81
Shear cell
to characterise internal friction in high-pressure compacted powder beds, 75
Single particle friction cell for measuring contact frictional properties of granular materials, 61
Smoluchowski's theorem
experimental investigation of, using photon correlation spectroscopy, 251
Sodium chloride crystals
influence of processing conditions on attrition of, 311
Source variation in the wet massing (granulation) of some microcrystalline celluloses, 273
Spherical particles
micro-mechanical connection between single-particle strength and bulk strength of random packings of, 125
Strain rate properties
high and low, of powders for continuum analysis, 51
Strength
single-particle and bulk, of random packings of spherical particles; micro-mechanical connection between, 125
Surfactants
influence of, on mechanical properties and comminution of wet-milled calcite, 403
Suspensions
dilute, aggregation of, using photon correlation spectroscopy, 251
relationship between interparticle forces and bulk rheology of, 371

Tablet properties as a function of the properties of granules made in a fluidized bed process, 293
Theoretical model of shear in a vibrating, non-cohesive particulate solid, 81
Thermophoretic and photophoretic motion of aerosols, 447

Understanding and controlling the crystal morphology of some ionic crystals, 219

Vertical pneumatic conveying dryers
computational fluid dynamics modelling of, 477
Vibrating, non-cohesive particulate solids
theoretical model of shear in, 81

Wall friction in the compaction of agglomerated ceramic powders, 7
Wet compacts
factors affecting the formation and properties of, 283

Young's modulus
of binary powder mixtures, 103
of elasticity of organic solids and their molecular structure, relationship between, 139
